

TINT BASE

MULTI-LAYER COATING SYSTEM

A CABINET CUSTOM COLOUR COAT

The most impactful step of our Multi-Layer Coating System is the custom colour. Unlike typical paint, our acrylic, polyurethane blended tint base is designed specifically for cabinets.

- ✓ Our colour product won't peel or chip like other paint
- ✓ Coats your cabinets in a completely smooth finish with no brush strokes or drip marks
- ✓ Choose your colour from the N-Hance Colour Palette, or simply find any sample cabinet
- ✓ Multiple thin layers of our acrylic polyurethane blend product provide more protection and durability than latex paint
- ✓ A water based product with low VOCs (Volatile Organic Compounds) makes it a safer option for homes

Most painters or DIY options use paint designed only for walls. Our colour product is designed with the unique properties of cabinet surfaces in mind. Its components are vastly different from average paint but gives the desired painted look.

Traditional Paint

Shows brush strokes and drip marks

Peels and chips over time

Not designed to withstand the daily use of cabinets

Tint Base

Won't peel or chip

Completely smooth finish

Specifically designed for the daily use of cabinets

Many painters and refacers are usually limited in their colour options. Our custom colour palette includes the current, most popular colours for cabinets, but we can match ANY colour swatch for your ideal hue!

Ultimately, the colour coat is the most dramatic part of your cabinet makeover. We use the right products to ensure your vibrant, beautiful look lasts.
