

The N-Hance Multi-Layer Coating System: Features & Benefits Sales Handbook

Inside this handbook, you'll find a clear, practical breakdown of the N-Hance Multi-Layer Coating System, designed to help you confidently explain what makes N-Hance different and why our process delivers superior results. This guide equips you with the knowledge and language needed to clearly communicate value, durability, and performance to homeowners.

This handbook is your foundation for product mastery. By understanding the logic behind the system and the benefits it delivers, you'll be able to educate clients, build trust, and reinforce the long-term value of choosing N-Hance with confidence.

Why N-Hance?

Value Proposition:

Looking to update the look of your kitchen without the mess, disruption and cost of a full remodel? Look no further than N-Hance®. Whether you want to restore the beauty of your existing finish or are opting for a completely new look, colour and finish, N-Hance has got you covered!

- N-Hance can give your cabinets a completely new look with our custom colour finishes. Choose from a wide range of on-trend colours or request a custom colour match.
- Our proprietary Multi-Layer Coating System is far superior to conventional refinishing, leaving no drips, no brush strokes, and a rock-hard factory-grade finish that resists chipping peeling and scratching commonly found with traditional refinishing methods
- Our process is fast, clean, and convenient, with minimal mess and little disruption to your daily life. Most projects are completed in just a few days and cabinets are ready for 100% immediate use.

Lightspeed® Nano Technology

N-Hance can transform your wood surfaces in days, not weeks, using Lightspeed® technology. Lightspeed® is our proprietary, industry-leading topcoat that uses ultraviolet (UV) light to instantly cure a durable, factory-grade finish onto wood surfaces.

With Lightspeed®, cabinets and wood surfaces are 100% ready for immediate use when we leave your home, delivering industry-leading durability with superior resistance to chipping, peeling, scratching, and staining compared to conventional refinishing methods.

Traditionally, refinishing cabinets and wood surfaces required several days of in-home work, heavy dust and odours, followed by additional days of “drying” and “cure” time before normal use can resume. Lightspeed® eliminates this downtime, providing beautifully refinished cabinets with minimal disruption, less dust, and little to no odour.

Benefits:

- **DURABLE:** More resistant to peeling, chipping, scratching

- **STAIN RESISTENT:** Lightspeed® rates high for chemical resistance, which protects against staining
- **FASTER:** We eliminate the downtime; surfaces are 100% ready for immediate use when we leave
- **ECO-FRIENDLY:** Non-toxic, low VOC, and very little odour.
- Available in Matte, Satin, Semi-Gloss, and Gloss finishes

Lightspeed vs. Traditional Refinishing

N-HANCE LIGHTSPEED®:

- Industry leading, factory grade finish, resistant to chipping, peeling, scratching and dinging.
- Minimal to no downtime and family disruption, 100% ready for immediate use
- Low VOC, little to no odour and dust

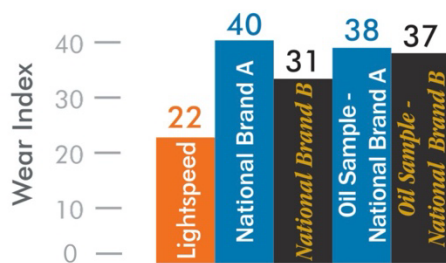

Traditional Refinishing:

- Finish prone to chipping, peeling, scratching and staining
- Several days and even weeks of family disruption
- Strong, lingering odour and dust

Durability

Durability (Wear Index): A measure of how much finish is lost over time due to abrasive forces. The lower the number, the more durable the finish.

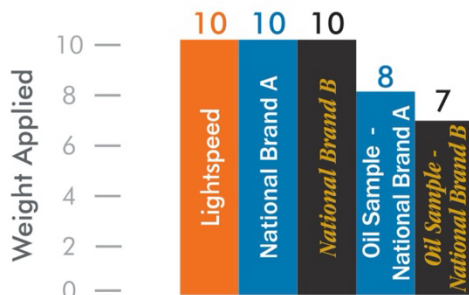

Lower Wear Index = Better Durability

Adhesion

Adhesion (Scrape Adhesion): A measure of how well a finish bonds to a surface. The higher the number, the better bonding finish the product is.

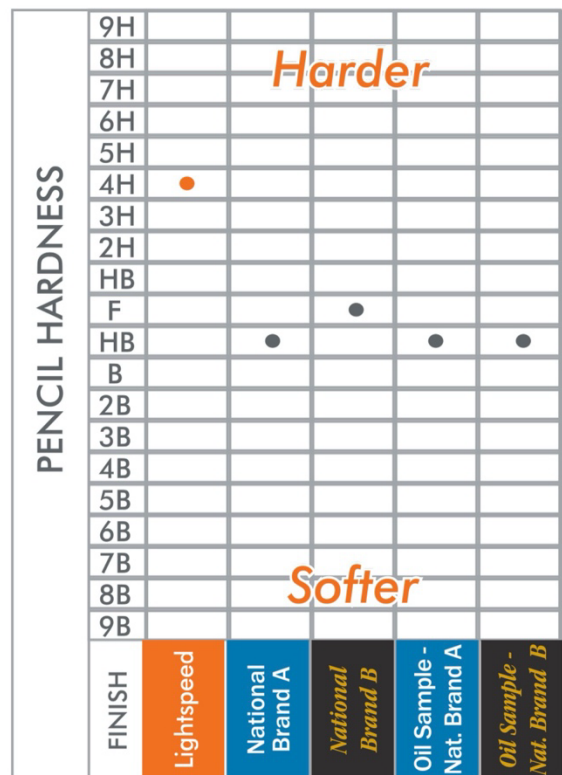

*Note: Maximum capability of test instrument is 10kg.

Scratch Resistance

Hardness (Pencil Hardness): A measure of surface hardness rated from 9B (softest) to 9H (hardest).

The softer finishes tend to scratch and mark easily.

The Logic Behind the N-Hance Multi-Layer Coating System

The N-Hance Multi Layered Coating System provides an industry leading level of protection and durability, far superior to traditional painting. While paint is typically used for decorative purposes and judged on its ability to hide, resist fading and stains, it does not typically have properties that resist wear and high contact that is common in areas like kitchens and bathrooms.

In contrast, **(FEATURE)** the N-Hance Coating System is specifically designed to resist wear, fingernail impacts, and grease staining from your fingers, **(BENEFIT)** making it more durable and longer-lasting than traditional painting.

The System consists of a **preparation solution**, a **primer**, a **colour coat**, and a **topcoat**, each of which plays a crucial role in creating a strong and protective coating.

1. The **preparation solution** (Surface Prep Pro) is designed to clean the wood surface and creates the foundation for the primer for greater adherence. Before any painting, N-Hance carefully cleans your cabinets with our special proprietary solution. Our cleaner eliminates any dirt, oil, grime, and build-up accumulated on your cabinets over time. This step is often overlooked and is essential for quality. Any contamination can create peeling and flaws in your final product. N-Hance ensures the best base for your colour change by performing exceptional preparation.
2. The **primer** (XB Primer Pro) is designed to bond to the wood, fill imperfections, and create a solid foundation for the colour coat. N-Hance primer is specifically manufactured for cabinets. It is designed to block bleed-through of the old colour and other possible imperfections. The primer helps your colour better adhere to the surface of your cabinets for a more durable, longer-lasting solution.
3. The **colour coat** is made of a finer material that creates a high-quality appearance and can bond to the primer, providing an even better foundation for the topcoat. Our products are made exclusively from water-based acrylic and polyurethane blends designed for cabinets. Most painters use latex paint designed for walls. N-Hance's product results in stronger adhesion that resists chips or peeling with a smoother finish.
4. The **topcoat** (Lightspeed, Ultra Clear, Hydro Oil) provides industry leading protection and durability, extending the life of the coating and making it easier to maintain over time. Our Lightspeed® system is used to instantly cure your cabinets. We bring the power of strong, factory finishes into your home, which allows you to instantly begin using your cabinets. You are left with a stunning finish that is highly durable and longer lasting than paint

At every level of our coating system, we work to elevate the quality and durability of the finished product by subjecting it to rigorous adhesion tests. The intent of the testing is to ensure that our coating system adheres to the wood as long as the wood surface integrity remains intact. High coating standards like this help provide long-lasting, reliable protection for your cabinets.

Overall, the N-Hance Multi Layered Coating System ensures a strong bond and a long-lasting finish that can withstand the demands and impacts of high-traffic and daily use.

Elevator Pitch Version

N-Hance isn't paint, it's a Multi-Layer Coating System engineered for maximum durability. While painters use products that often start to chip, peel, or stain within months, N-Hance uses a four-step system made specifically for cabinets and designed to handle the constant wear and impact of daily use.

Our proprietary process includes a deep clean to remove grease and buildup, our cabinet-specific N-Hance primer that bonds strong and blocks imperfections, a smooth colour coat, and our Lightspeed® UV finish that cures instantly. The result is a factory-grade finish that looks beautiful and resists chipping, peeling, and scratching for years to come.

M.L.C.S: Products, Process, Features & Benefits

Step 1: Preparation

Surface Prep Pro is designed to clean the wood surface and creates a foundation for the primer for greater adherence to the wood surface. Before any painting, we carefully clean your wood surface with Surface Prep Pro which is our special proprietary cleaner. Our cleaner eliminates any dirt, oil, grime, and build-up accumulated on your cabinets over time. This step is often overlooked by other providers and is essential for quality and adherence. Any contamination can create peeling and flaws in your final product.

N-Hance ensures the best base for your colour change by performing exceptional preparation.

Surface Prep Pro Features	Surface Prep Pro Benefits
Surface Prep Pro is designed to clean the wood surface and creates the foundation for the primer for greater adherence	It thoroughly eliminates any dirt, oil, grime, and build-up that has accumulated on your cabinets over time
Surface Prep Pro is essential for quality and adherence	It ensures the best base for your colour change

Step 2: Primer

N-Hance's XB Primer Pro is a high-performance Water-Based Urethane Primer specifically designed for cabinets, providing a superior solution compared to traditional primers meant for walls that do not undergo the same level of use as cabinets. Our urethane primer boasts outstanding adhesion properties, making it the ideal foundation for durable and long-lasting cabinet coatings. Urethane offers more effective adhesion to the wood than other primers, ensuring a stronger bond that keeps the coating firmly attached to the surface, even under stress or movement.

The XB Primer's adhesion is even stronger than wood itself, ensuring that the primer will remain intact even if the wood fails. Furthermore, it has undergone rigorous testing to ensure it can withstand temperature changes over time without cracking, peeling, or failing.

In addition to its exceptional performance, the XB Primer is also ultra-low VOC (Volatile Organic Compounds), making it a safer option for use in homes. It's designed to fill in

grain and imperfections in the wood twice as effectively as typical box store primers due to its excellent flow characteristics and high solids content. The primer is also tintable. This means you can colour faster without requiring as many colour coats to cover the surface. It also makes it so that so if, in the rare case something scratched the colour coat, that the scratch would be less noticeable because the bottom coat was the same colour.

By pioneering the use of a water-based urethane primer for cabinets, N-Hance demonstrates a commitment to innovation and providing high-quality coatings for the unique needs of homeowners.

XB Primer Pro Features	XB Primer Pro Benefits
Water-Based Urethane Primer specifically designed for cabinets	...Making it the ideal foundation for durable and long-lasting cabinet coatings
Our urethane primer boasts outstanding adhesion properties	...Ensuring a stronger bond that keeps the coating firmly attached to the surface
Urethane offers more effective adhesion to the wood than other primers	...Withstands temperature changes over time without cracking, peeling, or failing
The XB Primer's adhesion is even stronger than wood itself	...Ensuring that the primer will remain intact even if the wood fails
XB Primer is also ultra-low VOC	...Making it a safer option for use in homes
XB Primer is designed to fill in grain and imperfections in the wood twice as effectively as typical box store primers due to its excellent flow characteristics and high solids content	...Making the finished product look beautiful
XB Primer Pro is also tintable.	This means that you can get to colour faster without requiring as many colour coats to cover to surface colour

Step 3: Colour Coat

The **colour coat** is made of a finer material that creates a high-quality appearance and can bond to the primer, providing an even better foundation for the topcoat. Our products are made exclusively from water-based acrylic and polyurethane blends designed for cabinets. Most painters use latex paint designed for walls. N-Hance’s product results in stronger adhesion that resists chips or peeling with a smoother finish.

Colour Coat Features	Colour Coat Benefits
Specifically designed to resist wear, fingernail impacts, and grease staining from your fingers	...Making it more durable and longer lasting than traditional paint.
The colour coat is made of a finer material that creates a high-quality appearance and bond to the primer	...Providing an even better foundation for the topcoat
Made exclusively from water-based acrylic, polyurethane blends designed for cabinets	...Results in stronger adhesion that resists chips or peeling with a smoother finish

Step 4: Topcoat

N-Hance uses three topcoat products to provide a superior finish to the project. These products are Lightspeed, Hydro Oil and Ultra Clear.

Lightspeed® Nano

Lightspeed is a proprietary water-based UV-cured urethane coating used for finishing your cabinets. Lightspeed finish is cured by a special UV light, taking less than a quarter of a second for a full cure. Unlike normal coatings that can take weeks to cure, our UV-cured coating allows your kitchen to be ready for full use as soon as we leave your driveway.

Our Lightspeed Nano coating leads the industry in scrape adhesion, with adhesion even stronger than that of wood itself, ensuring that the Lightspeed will not chip as long as the wood surface remains intact. This is important, as it prevents chipping from occurring. Lightspeed also boasts high resistance to scratching, making it ideal for kitchen cabinets that are subject to the rigors of daily wear and tear.

The smooth surface of Lightspeed makes it easier to clean than oxygen-cured finishes, leaving fewer microscopic sites for bacteria to hide. It even prevents grease staining that is common around the pulls on kitchen cabinets from oils in human skin and

chipping from fingernails. With paint, it is common to see grease staining and chipping in these areas after mild to moderate use, but Lightspeed will hold up and look great for the long haul.

In addition, as a UV finish, Lightspeed offers higher clarity than oxygen-cured finishes, giving cabinets a beautiful and clear finish. We take pride in using only the best products and techniques to deliver exceptional results for our customers, and Lightspeed is no exception.

Lightspeed® Nano Features	Lightspeed® Nano Benefits
Lightspeed is a proprietary water-based UV-cured urethane coating that takes less than a quarter of a second to cure	...Our UV-cured coating allows your kitchen to be ready for full use as soon as we leave your driveway
Lightspeed® Nano finish outscored top commercial products in a series of durability measurements, including the wear index, pencil hardness and scrape adhesion tests.	...More resistant to chipping, peeling, scratching and delivers proven, industry-leading durability you can rely on long term
Lightspeed also boasts high resistance to scratching	...Making it ideal for kitchen cabinets that are subject to the rigors of daily wear and tear
Lightspeed delivers the smoothest surface available	...Prevents grease staining that is common around the pulls on kitchen cabinets from oils in human skin and chipping from fingernails

Ultra Clear Pro

Ultra Clear Pro is a proprietary, water-based acrylic urethane finish coat used as part of the N-Hance Multi-Layer Coating System. It is engineered to deliver a crystal-clear, protective finish on cabinet surfaces while maintaining the true colour and appearance of the cabinetry.

Ultra Clear Pro cures through exposure to oxygen, forming a durable, protective surface that enhances the look of cabinets while providing long-term protection. Cabinets are ready for light use after approximately 24 hours and can be fully used after the curing process is complete, allowing for a smooth transition back to everyday use

This finish is designed to resist yellowing over time, helping preserve the clean, bright appearance of cabinetry—particularly important for light or opaque colours. As a water-based product with ultra-low VOCs (Volatile Organic Compounds), Ultra Clear Pro is a great option for use in residential environments, with minimal odour during application.

Ultra Clear Pro creates a smooth, refined surface that fills microscopic pores in the cabinet finish. By reducing surface texture and dimpling, it helps prevent grease and dirt from settling into the finish, making cabinets easier to clean and maintain compared to traditional finishes. The result is a more elegant appearance and a cleaner-looking kitchen over time

Available in Semi-Gloss, Satin, and Ultra Matte sheens, Ultra Clear Pro delivers a polished, crystal-clear finish that enhances both appearance and durability. As part of the N-Hance Multi-Layer Coating System, it contributes to a strong, protective top layer designed to extend the life and performance of refinished cabinets.

Ultra Clear Pro Features	Ultra Clear Pro Benefits
Ultra Clear Pro is a proprietary, water-based acrylic urethane finish coat engineered for cabinet surfaces	...Provides a durable, protective finish designed specifically for the demands of cabinetry
Ultra Clear Pro cures through exposure to oxygen	...Creates a smooth, protective surface that enhances durability while allowing a controlled curing process
Ultra Clear Pro resists yellowing over time	...Makes it a safer option for homes with minimal odour during application
Ultra Clear Pro is a water-based product with ultra-low VOCs (Volatile Organic Compounds)	...Prevents grease staining that is common around the pulls on kitchen cabinets from oils in human skin and chipping from fingernails
Ultra Clear Pro creates a smooth, refined surface that fills microscopic pores	...Helps prevent grease and dirt from settling into the finish, making cabinets easier to clean and maintain
Ultra Clear Pro is available in Semi-Gloss, Satin, and Ultra Matte sheens	...Allows for a polished, crystal-clear finish that complements a wide range of cabinet styles

Hydro Oil

Hydro Oil is a proprietary finish coat used as the final step in the N-Hance Multi-Layer Coating System. This finish is uniquely formulated to cure through exposure to oxygen, creating a durable and protective surface that enhances the natural beauty of wood cabinetry.

Hydro Oil combines the classic aesthetic of traditional oil-based finishes with a modern, water-based, eco-friendly formulation. The result is a warm, rich appearance that enhances stained and wood-tone cabinets while delivering dependable protection against everyday wear and tear. Cabinets are ready for light use after approximately 24 hours and can be fully used after the curing process is complete, allowing for a smooth transition back to daily life.

This finish offers strong durability, adhesion, and scratch resistance, helping cabinets maintain their appearance in high-use areas of the home. Hydro Oil also features ultra-low VOCs (Volatile Organic Compounds), making it a safer option for residential environments with minimal odour during application

Hydro Oil fills the microscopic pores in wood surfaces, reducing texture and dimpling. This smoother surface prevents grease and dirt from settling into the finish, making cabinets easier to clean and helping preserve their appearance over time. Available in Semi-Gloss and Satin sheens, Hydro Oil delivers the timeless charm of oil-based finishes with the performance benefits of modern coating technology

As part of the N-Hance Multi-Layer Coating System, Hydro Oil contributes to a durable, protective top layer designed to extend the life and beauty of refinished cabinetry.

Hydro Oil Features	Hydro Oil Benefits
Hydro Oil is a proprietary finish coat that cures through exposure to oxygen	...Creates a durable, protective surface that enhances the natural beauty of wood cabinetry

SURFACE PREP PRO

A PROPRIETARY CLEANER

MULTI-LAYER COATING SYSTEM

Our N-Hance Multi-Layer Coating System begins with a thorough cleaning with our proprietary cleaner called Surface Prep Pro.

- ✓ Specifically designed for use on wooden cabinets
- ✓ A clean cabinet surface provides the ideal condition for products to properly adhere
- ✓ Correctly prepped surfaces prevent chipping and peeling
- ✓ A water based product with ultra-low VOCs (Volatile Organic Compounds) makes it a safer option for homes.

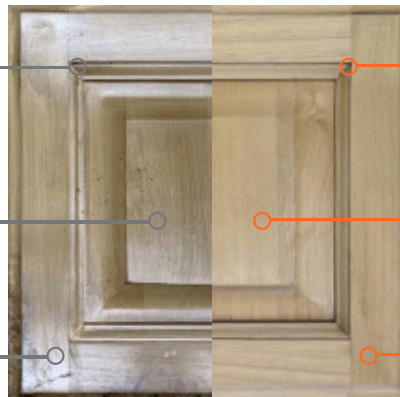

Cabinets, especially in high-traffic areas like kitchens, get dirty. Oil, grease, and waxes from daily use build up and keep paint from sticking. Typical painters don't always take the extra step to thoroughly clean your cabinets first, but N-Hance always does!

Traditional Cleaning

Waxes from everyday cleaning products can cause paint to peel and chip.

Food particles give an uneven surface.

Oil and grease can cause discoloration, and keep paint from sticking.

Surface Prep Pro

Surface is cleaned and neutralized from contaminants that can cause discoloration.

Smoother surface.

Edges and high touch spots have better adhesion.

Surface Prep Pro neutralizes and eliminates lingering contaminants on the surface of your cabinets that could interfere with the strong bond for your new colour. This first step is key for the integrity of your cabinet makeover. While typical painters often skip this important step, you can count on N-Hance provide the right start for your cabinet makeover with Surface Prep Pro.

Schedule your cabinet makeover!

XB PRIMER PRO

A CABINET SPECIFIC PRIMER COAT

MULTI-LAYER COATING SYSTEM

The base of the N-Hance Multi-Layer Coating System is the application of our XB Primer. This specialized primer provides the durable foundation your cabinet makeover needs to last for many years to come.

- ✓ Specifically designed for use on cabinets
- ✓ Fills imperfections and wood grain up to twice as well as typical primer
- ✓ Provides a smooth and even foundation for colour and finish
- ✓ Strong adhesion properties reduce cracking, peeling, and other forms of coating failure
- ✓ Tested and proven to withstand temperature changes over time
- ✓ A water based product with ultra-low VOCs (Volatile Organic Compounds) makes it a safer option for homes.

XB Primer is specially formulated to provide better coverage for wood grain and other imperfections on cabinets. It fills in the wood grain preparing a smoother base surface for your cabinet makeover.

XB Primer ensures not only a beautiful cabinet makeover, but one that is durable enough to remain beautiful through daily use of your kitchen.

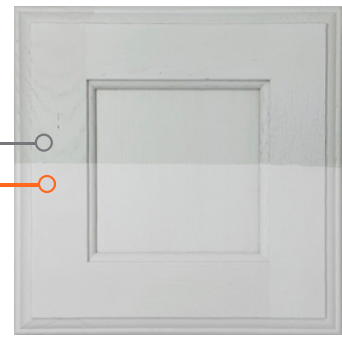

Traditional Primer

Woodgrain and imperfections can be seen.

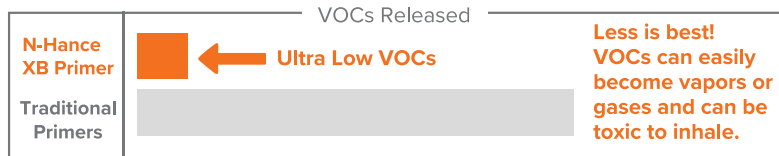

XB Primer

Smoothen surface with less woodgrain and imperfections showing.

N-Hance has pioneered the use of water-based urethane primer in this industry. Compared to oil-based primers, water-based products are an eco-friendlier choice. Water-based primers also have fewer VOCs off-gassing, making them a safer choice for your family as well.

The kitchen is one of the most used spaces in any home. Having a solid, durable foundation for your cabinet makeover is critical to ensure it lasts.

Schedule your cabinet makeover!

TINT BASE

A CABINET CUSTOM COLOUR COAT

MULTI-LAYER COATING SYSTEM

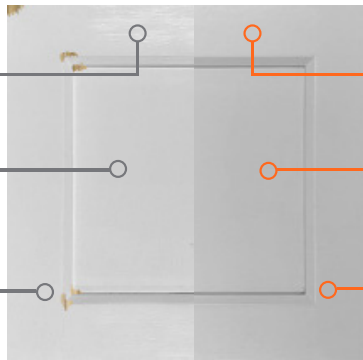

The most impactful step of our Multi-Layer Coating System is the custom colour. Unlike typical paint, our acrylic, polyurethane blended tint base is designed specifically for cabinets.

- ✓ Our colour product won't peel or chip like other paint
- ✓ Coats your cabinets in a completely smooth finish with no brush strokes or drip marks
- ✓ Choose your colour from the N-Hance Colour Palette, or simply find any sample cabinet
- ✓ Multiple thin layers of our acrylic polyurethane blend product provide more protection and durability than latex paint
- ✓ A water based product with low VOCs (Volatile Organic Compounds) makes it a safer option for homes

Most painters or DIY options use paint designed only for walls. Our colour product is designed with the unique properties of cabinet surfaces in mind. Its components are vastly different from average paint but gives the desired painted look.

Traditional Paint

- Shows brush strokes and drip marks
- Peels and chips over time
- Not designed to withstand the daily use of cabinets

Tint Base

- Won't peel or chip
- Completely smooth finish
- Specifically designed for the daily use of cabinets

Many painters and refacers are usually limited in their colour options. Our custom colour palette includes the current, most popular colours for cabinets, but we can match ANY colour swatch for your ideal hue!

Ultimately, the colour coat is the most dramatic part of your cabinet makeover. We use the right products to ensure your vibrant, beautiful look lasts.

LIGHTSPEED® NANO

A PROPRIETARY FINISH COAT

MULTI-LAYER COATING SYSTEM

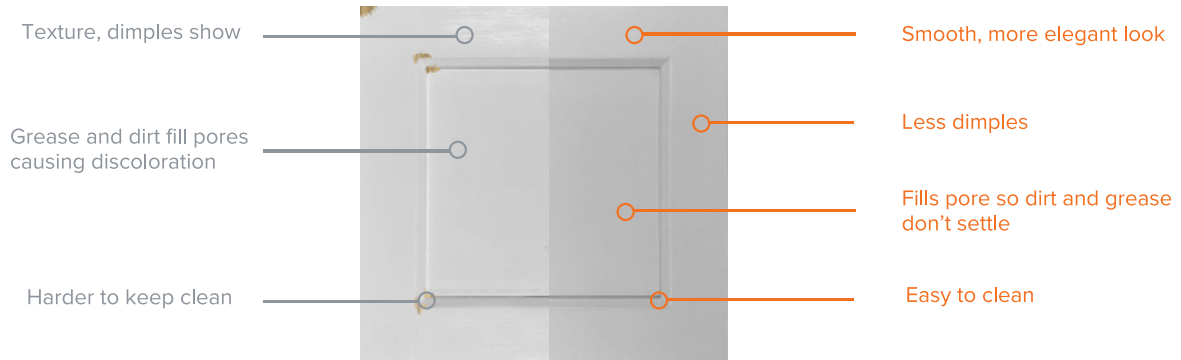

Lightspeed® Nano is the final step of our N-Hance Multi-Layer Coating System for your cabinets. This proprietary finish uses UV light technology to give you durable, smooth cabinets...fast.

- ✓ Cabinets are instantly cured and 100% ready for immediate use when we leave
- ✓ UV light technology provides a surface that resists stains
- ✓ Lightspeed® Nano provides industry leading durability, that is more resistant to chips and scratches
- ✓ Ultra-low VOCs (Volatile Organic Compounds) makes it a safer option for homes.

Lightspeed® Nano is a superior finish down to a molecular level. With UV light technology, properties of the finish become tightly condensed leaving a smooth, less porous surface for grease and dirt to settle into. This makes cabinets easier to clean and more resistant to various smudges from daily use.

Traditional Finish

Lightspeed® Nano Finish

This dense layer provides a rock-hard, factory-like finish that is more durable than most of the top commercial products available. This means it is more resistant to the chips, scratches, and peeling often found with typical paint products.

Some finishes can take weeks to fully cure. This leaves your cabinets in a fragile state until you can fully use them. Lightspeed® Nano, however, leaves your cabinets totally ready for use when we leave.

Schedule your cabinet makeover!
888-823-4822 | nhancecanada.ca

ULTRA CLEAR PRO

A PROPRIETARY FINISH COAT

MULTI-LAYER COATING SYSTEM

The final, and most impactful, step of our N-Hance Multi-Layer Coating System is our Ultra Clear Pro finish. This proprietary finish is uniquely formulated to cure upon exposure to oxygen.

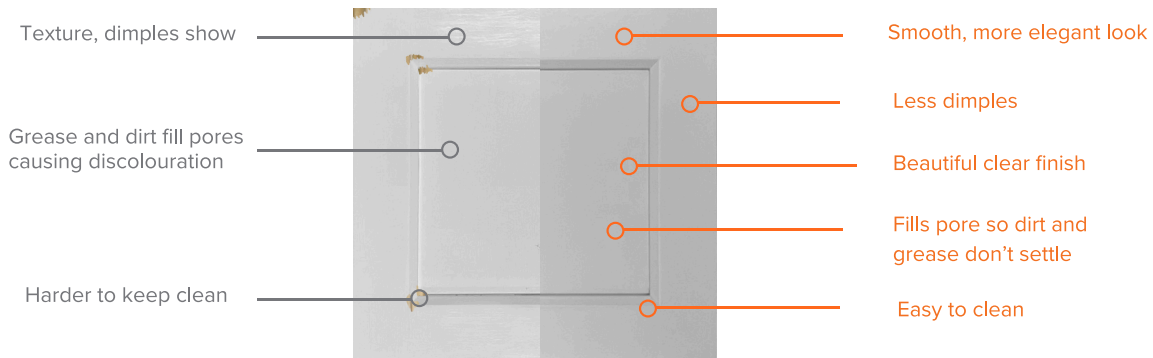

- ✓ Cabinets are ready for light use after 24 hours and can be fully used after 7 days
- ✓ Finish resists yellowing, ensuring the enduring beauty of cabinets
- ✓ Water-based product with ultra-low VOCs (Volatile Organic Compounds) makes it a safer option for homes

Ultra Clear Pro is a cutting-edge, water-based acrylic urethane finish that is engineered for excellence on cabinet surfaces. It has a beautiful clear finish, and is a great choice if you are hoping to achieve a polished finish.

This finish is available in Semi-Gloss, Satin, and Ultra Matte sheens, and leaves your cabinets with a crystal-clear finish.

Traditional Finish

Ultra Clear Pro

Your kitchen is one of the most used spaces in your home. It's crucial to have a durable, protective finish to ensure the longevity of your cabinet makeover.

HYDRO OIL

A PROPRIETARY FINISH COAT

MULTI-LAYER COATING SYSTEM

The final, and most impactful, step of our N-Hance Multi-Layer Coating System is our Hydro Oil finish. This proprietary finish is uniquely formulated to cure upon exposure to oxygen.

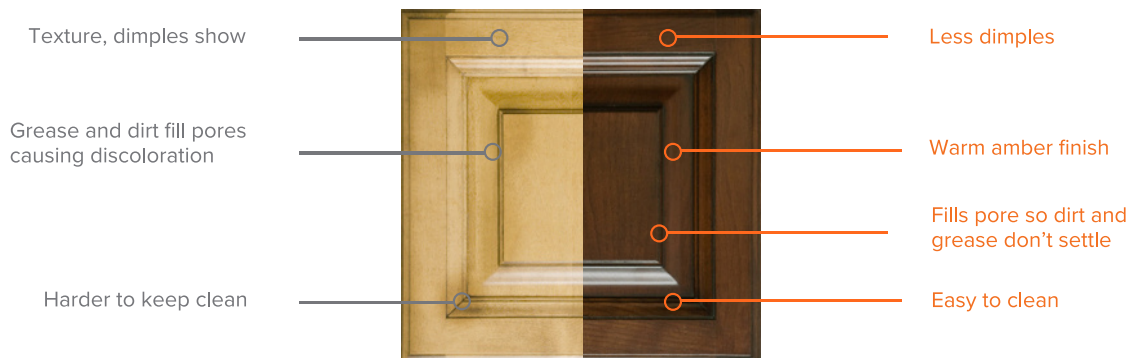

- ✓ Cabinets are ready for light use after 24 hours and can be fully used after 7 days
- ✓ Finish resists wear and tear, ensuring the enduring beauty of cabinets
- ✓ Good durability, adhesion, and scratch resistance
- ✓ Ultra-low VOCs (Volatile Organic Compounds) makes it a safer option for homes

Hydro Oil stands apart from other oil-based finishes by combining the classic aesthetic of linseed oil with a water-based, eco-friendly formula. This finish is a great option for wood and stained cabinets.

It offers the traditional charm of oil-based finishes, and is available in Semi-Gloss and Satin sheens.
